Cable Gland Assembly Instructions

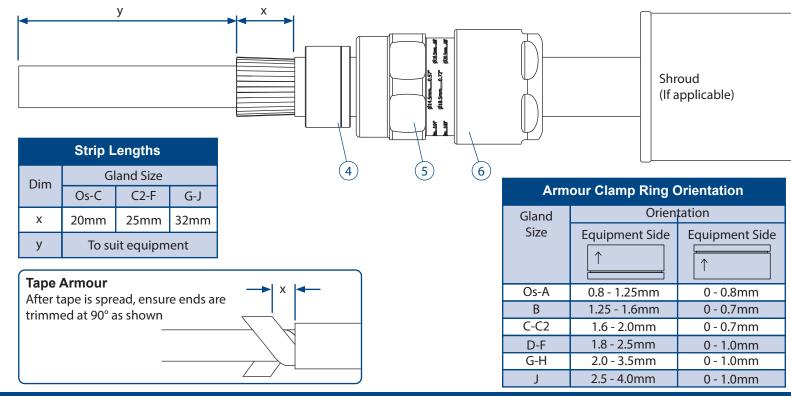

501 453 RAC

B: Cable Preparation

Slide shroud (if included), backnut @, middlenut @ and armour clamp ring @ onto cable. Confirm orientation of armour clamp ring is correct (see table below). Cut cable length, strip outer sheath and cut armour to lengths as shown in table below.

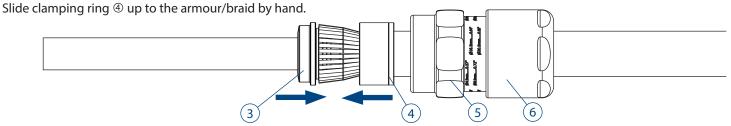

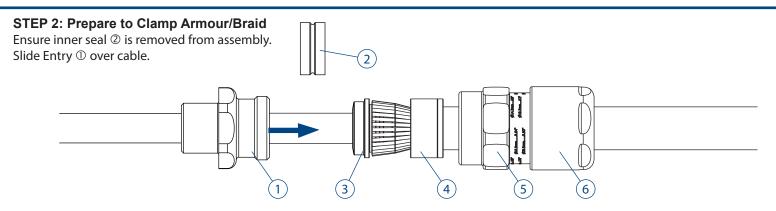

C: Installing Cable Gland

STEP 1: Fit Armour To Spigot

Slide spigot ③ over cable.

Push armour/braid up to spigot shoulder.

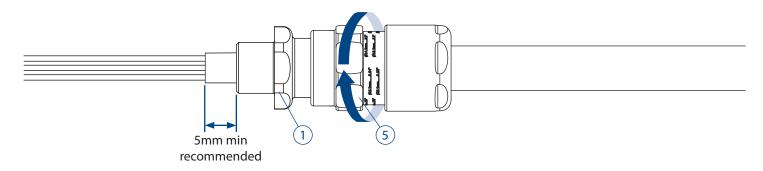

STEP 3: Clamp Armour/Braid

Slide middlenut ⑤ up to entry and hand tighten.

If not already screwed into equipment, grip the entry $\ \, \oplus \,$ with a spanner/wrench.

Use a second spanner/wrench to tighten half to three quarters of a turn.

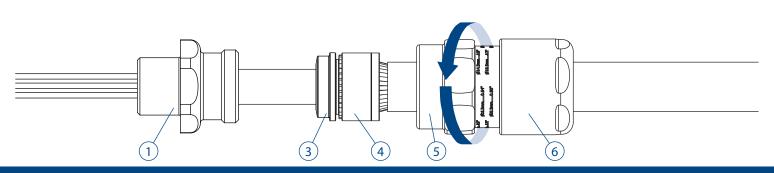

NOTE: Support the cable to prevent it twisting. To aid wiring inside the enclosure, it may be beneficial to strip the inner sheath as shown above.

STEP 4: Inspect Armour/Braid

Unscrew the middlenut \mathfrak{S} . The armour clamp ring \mathfrak{A} should now be locked in place. Visually inspect that the armour/braid has been successfully clamped between the spigot \mathfrak{A} and the armour clamp ring \mathfrak{A} .

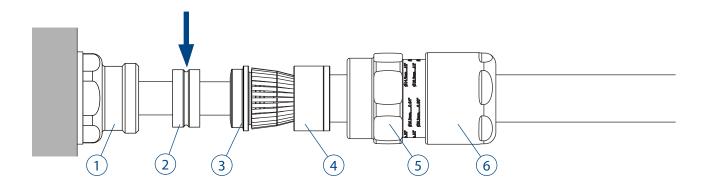

If clamping is not satisfactory, repeat step 3.

Images for illustration purposes only.
AI 302 - Issue AE / Page 2 of 4 Product supplied may differ from that shown.

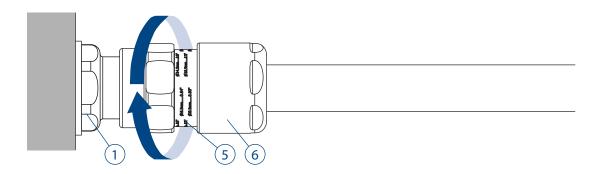

STEP 5: Install inner seal

Remove entry ① and refit inner seal ②. Replace entry ①.to enclosure. If required, use the appropriate IP washer.

STEP 6: Compress Inner Seal

With inner seal properly seated into the entry, tighten up the middle nut by hand. Using a wrench/spanner tighten a further 1 -2 turns until fully tight.

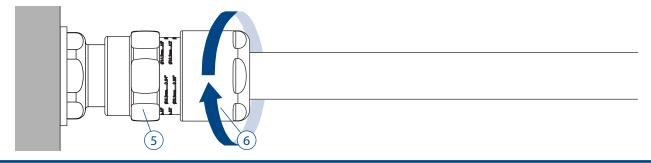

STEP 7: Install Backnut

Tighten the backnut © until a seal is formed around the cable.

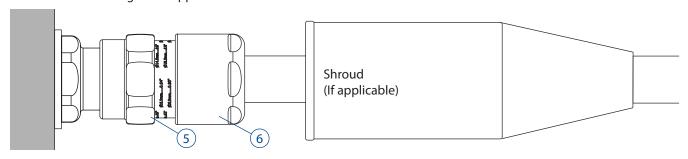

Use a wrench/spanner to grip the middlenut ⑤.

While preventing the middlenut ⑤ turning, use a second wrench to apply one further full turn to the backnut ⑥.

STEP 8: Inspect Backnut

Use the middlenut ⑤ guide as an indication that the backnut ⑥ is in the correct position to suit cable diameter. A diameter scale below is provided to assist this process. (Sizes O-F only) Slide shroud over cable gland if applicable.

Images for illustration purposes only.
Al 302 - Issue AE / Page 3 of 4 Product supplied may differ from that shown.

50, 55, 60, 65, 70, 75, 80, Diameter Scale (mm)

Technical Information 501 453 RAC

TECHNICAL DATA

Cable Gland Type: 501/453/RAC

Equipment Type: Group II Compression Cable Glands

Ingress Protection: IP66, IP67, IP68*

*30m for 7 days with thread sealant to

EN60529

Operating Temp: -60°C to +100°C

INSTALLATION NOTES

1. All cable glands must be installed by a suitably trained and competent individual.

2. Entry threads are in accordance with Metric BS3643 or NPT B1.20.1

3. Installer must check material compatability with enclosure and environment.

4. To maintain IP66, 67 & 68, Hawke certified sealing washer or other approved sealing method must be used.

5. Sealing face surface must be smooth and free from damage

6. Wall thicknesses depended on thread length or retention type (locknut etc). Exd must maintain the requirements of IEC/EN 60079-1

7. All entries must be installed perpendicular to the mounting surface.

ACCESSORIES

Hawke offer the following accessories to enable correct sealing and ground of cable

gland.

Shroud:For additional corrosion protectionLocknut:To secure gland into positionSealing Washer:For additional ingress protectionEarth Tag:For external bonding point

Serrated Washer: To prevent vibration loosening locknuts

SCHEDULE OF LIMITATIONS:

1. These cable glands are designed for use with unarmoured or appropriate Steel Tape Armour (STA), Steel Wire Armour (SWA), and appropriate braided cable. These cables must be with extruded sealing (solid polymeric) completely surrounding the 'core' (insulation and conductor), allowing for no holes or ventilation through the inner jacket or along the cores.

2. The Hawke 501/4 series cable gland connectors, when used in Class 1 Division 2 Classified areas, are not suitable to be interfaced with an explosion proof enclosure containing arcing and sparking devices, unless installed in conjunction with an approved explosion proof sealing fitting.

3. These gland are suitable for use with Certified Marine Shipboard armored/unarmored cables constructed to CSA Std 245 and IEEE45/IEC600092-353 Standards, or certified equivalent, for use on Shipboards and Offshore.

4. Must comply with Canadian Electrical Code and National Electric Code requirements for threaded entries.(CSA Only)

5. For Ex e applications, a sealing washer or thread sealant may be required between the enclosure and the gland to maintain the IP rating of the enclosure.

6. When used with unarmored or braided cables are only suitable for use with fixed apparatus.

TORQUE VALUES

All torque values below were generated on metallic mandrels. For cable, it is recommended that the assembly instructions are followed.

Torque Figures N/m											
Gland Size	Os	0	Α	В	C	C2	D	Е	F		
Middlenut Torque	6	6	8	8	10	15	15	28	35		
Backnut Torque	12	12	20	30	35	45	56	60	75
