## Brief product description:

BG's Nexus range of plate switches have been designed to perform at 10AX inductive loads.
The subtle design will blend with any décor - suitable for domestic or commercial installations. The Fan Isolator switch has a triple pole switching design, however can be used for double pole applications if required.

## Features:

- White moulded round edge, sleek and slim with softly rounded edges
- $10 \mathrm{Amp}, 10 \mathrm{AX}$ inductive rated
- Easy to install, supplied with fixing screws and installation instructions
- Captive, backed out terminal screws for fast installation
- The Fan Isolator switch has a triple pole switching design, however can be used for double pole applications if required.

## Technical Specifications

| Standard(s) | BS EN 60669-1 |
| :---: | :---: |
| ASTA Approval | Yes, License Number 1010, 815 License Number 1015 |
| Rating | $10 \mathrm{Amp}, 250 \mathrm{~V}$ (10AX - no derating for inductive or fluorescent loads) |
| Contact Gap | 3.0 mm minimum |
| Terminal Capacity - L \& N | $4 \times 1.0 \mathrm{~mm}^{2} 4 \times 1.5 \mathrm{~mm}^{2} 2 \times 2.5 \mathrm{~mm}^{2} 1 \times 4.0 \mathrm{~mm}^{2}$ |
| RoHS Directive | No |
| WEEE Directive | No |
| Mounting Box Depth(Min) | 16mm (811, 812, 813, 814, 815, 842, 843 products) |
|  | 25 mm (844, 846 products) |
| Fixing Centres | $60.3 \mathrm{~mm}(811,812,813,814,815,842,843$ products) |
|  | 120.6 mm (844, 846 products) |
| Size | $86 \mathrm{~mm} \times 86 \mathrm{~mm} \times 6.9 \mathrm{~mm}$ ( $811,812,813,814,815,842,843$ products) |
|  | $146.5 \mathrm{~mm} \times 86 \mathrm{~mm} \times 6.9 \mathrm{~mm}$ ( 844,846 products) |

## 10 Amp 10 AX Switches

## Installation Information

## Safety Warning

For your safety, this product must be installed in accordance with local building regulations. If in any doubt, or where required by the law, consult a competent person who is registered with an electrical selt-certification scheme.
Further information is available online or from your Local Authority.
Please read carefully and use in accordance with these safety wiring instructions.
Before commencing any electrical work ensure the supply is switched off at the mains either by switching off the consumer unit or by removing the appropriate fuse. Wiring should be in accordance with the latest edition of the IET regulations (BS 7671). To prevent fire hazard always use cable of the correct rating, size and type for the application.
Any bare earth wires must be covered with appropriate green/yellow sleeving.
Warning do not exceed the load rating of this device as stated on the rear of the product.
If in doubt consult a competent electrician.

## Wire Identification - Twin \& Earth Cable

EARTH = Green/Yellow Sleeving
NEUTRAL = Black (pre Apr 04) / Blue (after Apr 04)

Technical Helpline: 03300249279
If in doubt consult a competent electrician.

LIVE = Red (pre Apr 04) / Brown (after Apr 04)
The ends of the individual conductors should have the insulation removed by approx. 12 mm . Any bare earth conductors should be sleeved to within 12 mm of the ends (These details are for general information only and conductor lengths may need to be trimmed in certain installations).

## General Installation Instructions

1) If using the new product to replace an old one, note the cable connections and wire up new product in the same way as the old one, with Earthing as stated in these instructions
2) Ensure the mounting box (metal or patress) for either flush or surface mounting is the appropriate size for the product
3) Route the cable through the most suitable entry point of the mounting box. If a metal box is used, a protective cable grommet should be used.
4) Cables should be prepared so a sufficient conductor length reaches the terminals. Strip the ends of the individual conductors so that an adequate length enters the terminals,
5) Carefully arrange the wiring to lie along the edges of the product or box, keeping the central area clear.
6) To assist with the correct installation please consult the appropriate wiring diagram on this leaflet.
7) When connecting the new accessory ensure that only the bare end of the wire enters the terminal, and no bare wires are visible

Always tighten the terminal screws securely, but do not overtighten.
An earth connection should always be made between the mounting box earth terminal, and the accessory earth terminal, where fitted. If this earth wire is bare, it is essential that it is sheathed with a length of green/yellow sleeving
8) Carefully position the accessory into the wall box, ensuring that no wires are trapped between the plate and the wall. Do not overtighten the screws. (Fit screw covers + clip-on)
9) Once work has been completed correctly, replace the fuse for the circuit, switch the power back on, and test.

The product is now ready for use.

* Note - If your installation uses a four lug metal mounting box, remove the top and bottom lugs or bend fully back.

## One Way Switching

One way switching is used in installations that require just one switch to control a light (or circuit) i.e. on or off
A two-way switch can be used for one-way connection, use COM and L 1 terminals.
For multiple gang switches ( $2,3,4$ \& 6) repeat wiring method for each switch.

Two Way Switching
Two way switching is used where a light is controlled by two switches
For multiple gang switches ( $2,3,4$ \& 6) repeat wiring method for each switch.

All earth wires must be sleeved
and terminated to the back box

## 10 Amp 10 AX Switches

## Installation Information

Bell Push
The bell push is a one way switch with a retractive rocker switch. Before installing ensure a bell unit is suitable for supply voltage.

## Intermediate Switching

Intermediate switching is used in installations that require three or more
switches to control a light, and should be used together with two 2-way switches.

Fan Isolator - 3 Pole Switch
During repair or installation or routine maintenance the power supply to the fan unit must be disconnected. This isolating switch can be installed as shown in the diagrams to enable the remainder of the circuit to remain live.
These instructions should be read in conjucntion with the instructions supplied with the fan unit and the latest IEE Wiring Regulations.
Please follow the appropriate wiring diagram below for your particular installation.

## Important

The continuity of the protective conductors must be maintaied. The isolator switch shall be so situated as to be inacessible to a person using a fixed bath or shower

All earth wires must be sleeved
and terminated to the back box

All earth wires must be sleeved
and terminated to the back box
